On the warm black sand beaches of the Caribbean island of Dominica, hundreds of tiny baby sea turtles emerge from their eggs and crawl to the sea. If you know when to go, you can witness this amazing natural phenomenon for yourself, and some hotels even have sea turtle conservation programs where you can help protect the adorable hatchlings (under the supervision of a trained scientist, of course). It's a spectacular experience all animal and nature lovers should have at least once in their lives.

All sea turtle species are threatened with extinction, often because of humans disturbing or destroying nesting beaches. **Rosalie Bay Resort**, where this photo was taken, has pioneered sea turtle conservation efforts in Dominica, and offers their guests **opportunities** to learn about and interact with leatherback, green (pictured), and hawksbill sea turtles.
